all sorts of men in generall.

By *Seah Partridge*, Surveyor, Practitioner
in the *MATHEMATICKS*.

L O N D O N,

Printed by *J Bell*, for the Companie
of S T A T I O N E R S

The Common Notes, and moveable Feasts
for this present year, 1652. according both to the
English Account, and reformed Account.

	The English Ac- compt.	Reformed Ac- compt.
The Dominical Letter	D C	C F
The Golden Number	29	19
The Epact	19	19
The Circle of the Sun	9	9
The Roman Indiction	5	5
Shrove Sunday	February 29	February 11
Easter Day	April 18	March 31
Ascension Sunday	May 23	May 5
Whitunday	May 27	May 9
Trinity Sunday	June 6	May 19
From Christs birth day	June 13	May 26
1 st Shrove Sunday	9 weeks, 3 day	6 weeks

The year of our Lord God, according to the computation of the Commonwealth of England, for the date of al Evidences, Records and Writings beginneth the 25. day of March. So that the 24. day of March is the last day of the year, 1651. and the 25 day, is the first day of the year, 1652.

The

The man in the Zodiaque. Or a discription
of the 12. parts of mans body, as they
are Attributed to the 12. parts of the Zo-
diaque, usually called (by the vul-
gar ignorant) the Anatomy

Being a thing in those books much desired by such as know
no use of it.

The Characters of the Signes, Planets and Aspects with their
signification.

V Aries head and face, **♉** Taurus necke and throat,
♊ armes and shoulders, **♋** Breast, Stomack, and
Ribs, **♌** Leo heart and back, **♍** Virgo bowels and belly,
♎ Libra loynes and reines, **♏** Scorpio secret members,
♐ Sagittarius thighs, **♑** Capricornus knees, **♒** Aquarius
leggs, **♓** Pisces the feet.

♄ Saturne, **♃** Jupiter, **♂** Mars, **☉** Sol, **♀** Venus, **☿** Mer-
cury, **☾** Luna.

♌ Conjunction. ***** Sextile. **□** Quartill. **△** Trine. **♁** Opposition
♈ the Dragons head. **♏** the Dragons Tayle.

The Contents of the severall Columnes of this Kalender.

IN the head of each Month under the name thereof, is set forth the Change, Full, and Quarters of the Moone.

Below that in the first and second Columnne are the dayes of the Month, and dayes of the Week, according to the English acco^{nt}, G being the Sunday Letter; and in the last Columnne next the right hand is contained the acco^{nt} used beyond the Sea, F being their Sunday letter.

In the third Columnne is contained the Feastivall dayes, and other dayes of note, used for keeping of Fayres, &c. the beginning and ending of the Terms, with their returns; the Suns entrance into the 12 signes, his place upon severall dayes of the moneth, his rising and setting, and the length of the day.

In the fourth Columnne is contained the place of the Moone every day at noone.

In the fifth Columnne is contained the Moones age.

In the sixth Columnne is contained the places of the Planets at Noone for sundry dayes of the Month, and also the principall Aspects of the Planets one with another.

In the seventh Columnne is contained the houre and minute of the Suns rising for every day in the yeare.

January hath xxxi. dayes.

New Moone the 1 day, near 5. in the morning.
 First Quarter the 7. day, 43 min past 8 at night.
 Full Moon the 15. day, 10. min. past 3 a clock afternoon.
 Last Quarter the 23 day, 18. min past 7. at night.
 New Moon the last day, at 1. in the morning.

The second part of this Al- minack for the year 1652.

Of the division of the year.

THe year according to Astronomical distribution is divided into four quarters or parts; each quarter taking its beginning at such time as that glorious Lampe of light, the never resting Sun cometh to one of the four Cardinall points of the Eclipticke. And these four points, are the two *Equinoctiall* points, and the two *Solstitiall* points.

The first quarter Astronomically is called the Spring quarter, and alwayes begins when the Sun entreth into the first point of the first Zodiacall signe *Aries*, which this year happeneth on Tuesday the ninth day of *March* at eighteen minutes past eight a clock at night, according to the doctrine of *Harmonicon Caeleste*. Which Tables in my opinion are the best yet extant; if not the best, yet so good that none are better. I had erected a Scheme to the use of the Sun's inspiration into this new revolution, and drawne some observations from it, as also from those great Eclipses happening this year, but because those observations will be unpleasing to two sorts of men in this Commonwealth, I forbear, for they are not willing to beare into what a declining condition they are falling.

An Alminack

The second quarter or part of the year is the Summer quarter, and beginneth on Thursday the tenth day of June, thirty two minutes after ten a clock at night, for then the Sun entred the Solstitiall signe *Cancer*.

The third part or quarter of the Astronomical year, is called *Autumne*, and this beginneth when the Sunn treeth into the first point of the second Equinotiall signe *Libra*, to which point the sun cometh on Sunday the 12. day of September at thirty eight minutes after one a clock afternoone.

The fourth and last quarter of the year is *winter* quarter, and Commenceth at that very moment of time in which the center of the Suns body cometh to the first point of that second Solstitiall signe *Capricorne*, and that this year falleth out to be on Saturday the eleventh day of December at three a clock and twenty one minutes in the morning, and this Astronomical year endeth on the tenth day of March about halfe an houre past one a clock in the morning, the succeeding year.

The Eclipses of this year 1652

THIS is a year famous for great and many Eclipses, of the two great lights, and great Eclipses (especially when both great and many) are not without great effect. This year there will be four Eclipses, two of the Sun and two of the Moone, and all of them will be almost Tottall Eclipses, both them of the Moone, and the first of them of the Sun will be seen of us in England, if the Ayre be cleere, how ever we shall finde a great darknesse at the times of these Eclipses.

That Eclipses of the Sun visible to us in England hapneth on Munday the twenty nine of March in the forenoone; then will the Moone put her selfe betweene the

for the Year 1652.

Sun and us, and with Her darke body hide him almost wholly from us, causing for a time a great darknesse, as if it were twilight, a while after Sun set.

	H.	M.	S.
It beginneth at	9.	39.	7.2
The middle is at	10.	45.	12. } forenoon
The end at	11.	53.	8. } forenoon
The whole duration	2.	14.	1.
Time of Incidence	1.	5.	33.
Time of Emerfion	1.	8.	33.

The parts of the Suns body obscured are about eleven parts of twelve of his Body.

The other Eclipse of the Sun will be on the twenty two day of September about four a clock in the afternoone. This Eclipse will be almost a totall Eclipse the whole people and parts of the world, in and near about the South part of America, under the Longitude of 142 degrees, and Latitude of 52 degrees Southwards, but this Eclipse is not to be seen in any part of Europe.

The Moones Eclipses:

The first Eclipse of the Moone will be on Munday the fifteenth day of March in the morning early:

	H.	M.	S.
It beginneth at	2.	13.	47. } Morning
The middle is at	4.	4.	44. } Morning
The end is at	5.	59.	48. } Morning
The whole duration	3.	46.	1.
The time of incidence	1.	50.	19.

The part of the Moones body Eclipsed are eleven parts of twelve very near.

An Almanack

That little light the *Moone* will have at the middle of this Eclipse will be on the upper part of her body; for at the beginning of this Eclipse, the *Moones* Latitude is North descending thirty six minutes, fifty eight seconds, and at the end twenty five minutes, and thirty five seconds.

The second Eclipse of the *Moone* is upon Tuesday the seventh of September at night.

	H.	M.	S.
The beginning is at	4.	52.	12.
The middle at	6.	34.	50.
The end at	8.	17.	28.
The whole duration	3.	25.	16.
The time of incident	1.	47.	38.

The body of the *Moone* is obscured above ten parts of twelve of her diameter, and that light she hath at the middle of the Eclipse is on the lower side of her body; her latitude being South descending 33. min. Forty six minurs the *Moone* riseth Eclipsed, and she Sets during the time of the Eclipse.

Certain Elections for Husbandry according to the judgement of Astrologers.

The best time to plant and Graft, is when the Moon is increasing in *Taurus*, or *Aquarius*.

Remove young trees in the last quarter of the *Moone* in *Taurus*, or *Capricorne*, and in the Moneths of September, October, November, and February.

Sow all kinde of Corne, the *Moone* increasing, and in *Cancer*.

Set or sow all kinde of seeds, the *Moone* well seated

in

for the Year 1652.

in *Aries, Taurus, Cancer, Virgo, Libra, Capricornus, Aquarius* or *Pisces*; but with this proviso, that your Seeds whose Roots be round should be sown three or four dayes before or after the full Moone.

Gather all fruits at the full Moone.

Fell Coppy Woods, and shear Sheep in the first quarter of the Moone.

Cut Vines in *February, March* or *September*, the Moon increasing, and in *Aries, Libra* or *Scorpio*.

Libbe or geld Cattle the Moone increasing, and in *Aries, Sagittarius*, or *Capricorne*.

Muck Land that Weeds may not abound, in the old of the Moone.

Gather Fruits, Herbes and Flowers to keep after full Moone.

Whatsoever Corne, or Trees be set or sown while the Sun or Moone be Eclipsed, never cometh to be good: Also any Corne or Plant set or sown within six hours before or after the full Moone in Summer, or new Moon in Winter, is subject to blasting and Canker.

*A Tide-Table, shewing what Moon makes a full Sea,
in all Havens, in and*

The Use of the Tide-Tables aforegoing.

IN the first of these two Tables are set downe the names of severall of the principal Havens and Ports in & about England, & at the right hand of the Table after the names of the places is set the point of the Compass (represented by letters) which the *Moon* is upon when it is full sea at those places, and at the beginning of the lines on the left hand of the Table are set numbers from 1. to 16. which may be called the *Index* of the places in those lines named. And in the other Table on the head thereof is set down in two lines the *Moons* age, and on the left hand of the Table are first set the 16. *Index* numbers of the former Table: Against these *Index* numbers are two lines of numbers, the uppermost line of which lines are hours, and the lowermost minutes. The joynt use of these two Tables is thus by example:

The 6. day of *January* this year 1652. I would know the time of full sea at *London*; first I note in the calender that the *Moon* is that day 14. dayes old, next I look in the first Table for *London*, & there I finde its *Index* number to be 5; & at the other end of the line I find that a *South-west Moon* makes a full sea there, then I come to this latter Table, & there I look the *Moons* age 14. in the head or upper lines of the table, & 5. the *Index* number on the left side, and in the common meeting, I finde 2. hours 12. min. therefore at 12. m. past two a clock it is full sea at *London* the 6. of *Jan.* 1652. And at the same time it is full sea at *Tinmouth*, *Hartlepool*, and the rest of the places, in those lines belonging to the *Index* number 5. Also the Table sheweth that the same 6. day of *Jan.* it is full sea at *Dublin* by a *South-east* by *east Moon*, at 24. m. past 7 a clock, and so of any other places. But the Tides do not fall out alwayes exactly at the time in the Table set downe, for many times by reason of great winds, land-floods, but especially by reason of the *Moons* latitude, the Tide doth sometime differ somewhat from the time herein shewed.

for the Year 1652.

Astronomical Calculations 1652.

The Precession of the Equinoctial	De.	Min.	Sec.
The obliquity of the Ecliptick	23.	58.	29.
The Eccentricity of the Sun	23.	31.	30.
	2.	2.	48.

The mean Longitude of the Sun }
 Jan. the first, is } 28. 20. 35. 25.

The Apogee of the Sun is } 31. 6. 37. 48.

The Apogee of the other Planets are
 briefly as followeth.

Saturne in 27. 34. 25. of Sagittarius.	De.	Min.	Sec.
Jupiter in 8. 28. 55. of Libra.			
Mars in 29. 57. 54. of Leo.			
Venus in 6. 47. 23. of Cancer.			
Mercury in 2. 13. 12. of Sagittarius.			

The true Apparent length of the Tropical year is
 365. days 5. hours forty eight minutes fifty five seconds.
 The length of the Starry or Siderial year is 365.
 dayes six hours, nine minutes, fifty five seconds.

The distance of the seven Planets from the Earth,
 as they are in their mean motions.

Saturne	9873000.	
Jupiter	3431400.	
Mars	1500700.	Miles.
Sol	989000.	
Luna	48760.	

Venus and Mercury are distant as the Sun: The bright
 star Venus is an Evening star from the beginning of the
 year till September, and from thence to the years end
 he is our Morning star, appearing a little before the
 Sun.

**A brief Chronology of diuers memorable
things since the birth of Christ, shewing in
what yeer they happened, and how long
it is since, to this year 1652.**

	years of Christ	years since
C hrist was borne	1	1652
Christ suffered death upon the Crosse	33	1619
Paul converted, and Stephen stoned	34	1618
Agrippa eaten up of wormes	45	1607
Saint John writ his Gospell	57	1595
Rome was burnt by command of Nero	61	1591
Ioseph of Arimathea came into England	63	1589
Jerusalem destroyed by Titus	70	1582
John writ his Revelatiō in Patmos	95	1557
England first received the Christian faith	177	1475
Scotland first received the Christian faith	203	1449
Constantine the first Christian Emperour	324	1328
The first generall Counsell	325	1327
The Tower of London built	569	1083
Clocks and Dialls first set up in Churches	606	1046
Cambridge was made a Vniuersitie	635	1017
England first diuided into Parishes	636	1016
Ebrichus made England first a Monarchy	802	840
The Dains first came into England	1018	634
Westminster hall built	1100	552
The Conquest of England by Duke William	1066	586
Jerusalem taken by the Turkes	1010	642
Godtry of Bullen takes it from them	1099	553
Pauls Church in London built	1086	566
The Bible first diuided into Chapters	1195	457

**A Catalogue of the principall Faïres of
England and Wales both fixed and moveable,
wherein many Errors (in all bookes hereto pub-
lished) are corrected and reformed.**

Faïres in January.

THe third day at Lambith, on Twelſe day at Salis-
bury, the ſeventh day at Langinnie, the twenty five
being Saint *Pauls* day at Gravesend, at Briſtoll, at
Churchingford, the thirty one day at Landſell, the Fri-
day after twelſe day at Lichfield, Every Wedneſday
from Christmas unill June at Northalerton in York-
ſhire.

Faïres in February.

The firſt day at Bromley in Lancaſhire, the ſecond day
at Beconſfield, and at Beckleſworth, at Bath, at Bud-
worth, at Maidſtone, at Linne, at Budworth, at Reading,
at Forriugdon, at Vizes in Wilſhire, at Goodlemew, at
Whiteland; the third day at Boxgrove, at Brimley,
the ſixth and ſeventh and eight dayes at Stafford, for all
kinde of Merchandize, without any Arreſts: the eight
day at Tragarron, the ninth day at Landaffe, the four-
teenth at Oundle in Northamptonſhire, and at Feverſham
in Kent, the twenty four day at Uppingham in Rutland-
ſhire, at Baldock, at Highamſerries, at Walden at Teuf-
bury, at Henly upon Thames, at Froome, at Stanford.

Faïres in March.

The firſt day at Langadog, at Madrim, at Langeveſſ,
the third day at Bremwelbrake, the fourth day at Bed-
ford, at Oukham. The eight day at Tragaron. The
twelfth day at Aſſome, at Bodham, at Sudbury, at Wo-
burne,

The Faires.

burne, at Wexham. The thirteenth day at Bodwin, at Wye. The seventeenth day at Patrington. The eighteenth day at Surbridge. The twentieth day at Durham, at Alesbury. The twenty fourth day at Lanerchimech. The twenty five day being our Lady day at Saint Albons, at Northampton, at Maldin, at Cardigan, at Huntington, at Newcastle, at Ashwell in Hertfordshire, at Walden in Essex, at Woodstock, at Olney, at Saint Jones in Worstershire. The thirty one day at Malmesbury.

Faires in April.

The second day at Hitchen, at Rochford. The fifth day at Wallingford. The seventh day at Darby. The ninth day at Billingsworth. The twenty two at Stabworth.
